The World's **FASTEST** Curing Systems

Hydromate

The pioneers of mobile air movers are delighted to introduce a new high performance, low cost alternative to the mobile systems that are currently available.

Hydromate 3 incorporates the same head design and drying performance enjoyed by its patented forerunner as well as now having even greater adjustability of the air movers to suit all applications. You can choose to run with the factory settings or a variety of other positions to suit the size and shape of the paint job.

The maximum height of Hydromate 3 has now been increased to 5ft which even allows you to dry basecoat on SUV's and people carriers.

Simply plug-in a single airline to your Hydromate 3, open the air valve and produce drying times on waterborne or solvent-borne basecoats to as little as 5 minutes.

Pressure

Supply air	1.2 - 1.5 bar (gauge) (17 - 21 psi (gauge))
Hydromate 3	1.0 - 1.2 bar (14 psi) (14 - 17 psi (gauge))

Air flow

Supply air	85 l/min (gauge) (nominal) (3 cfm (gauge))
Hydromate 3 output	39,000 - 44,000 l/min (gauge) (nominal) (1,400 - 1,600 cfm (gauge))

■ Heads factory set for optimum performance but can be easily moved into other positions.

■ High performance air mover heads - on average 25% more output than that of its rivals. High performance hand held version also available.

■ Unique design allows venturi heads to be rotated 90 degrees allowing optimum position for drying of multi panels down the side of a vehicle.
